

APM

APM Aircraft scheduling + slot management

A suite of scheduling and slot management tools that are tailor-made to help you plan, manage and monitor your airline's schedule and slots

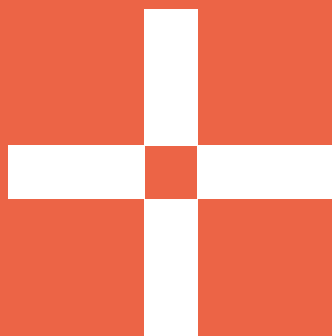

Efficiently manage your network with APM's Scheduling Suite

The challenges and competition that airlines face today call for advanced systems to support the development and management of their network.

The APM Scheduling suite is designed to help you achieve your business goals - offering versatile, intelligent solutions, for long term network planning up to the flight-watch period, with tools to support analysis.

Making the complex simple

Build a quality and compliant schedule

Your network plays a major part in the profitability and success of your airline's brand. With SchedulePlanner you can easily generate efficient schedules whilst maintaining compliance.

- Build schedules in UTC and local time with advanced visual tools and user-friendly editing functions
- Quickly create ad-hoc, rotational, triangular and series flights with a range of block time options

SchedulePlanner is used by airlines globally and manages 500k+ flights per year

Optimise your schedule

APM's intelligent fleet assignment optimiser works hard so you don't have to; automatically allocating flights to your aircraft at the click of a button.

- Considers constraints including range, aircraft equipment limitations, curfews and aircraft standstills
- Produces robust and accurate results, saving you valuable time and effort

Clearly view and amend your schedule

The graphical display offers a clear view of your schedule whilst showing the information that is important to you and your team

- Drag and drop functionality to swap, move and unassign flights
- Quick search tools, filters and alerts of information relevant to you
- Highly informative display including commercial, ATC flight numbers and payload

Increase revenue with automated codeshare management

Fly higher, faster and in the cloud with APM's scheduling tools

Our future ready, cloud-based scheduling solutions are accessible any time, any place, assisting your airline with smoother and more efficient operations.

Benefit from

- A user-friendly interface, assisting with accelerated decision making
- Intelligent solutions with comprehensive functionality and a rich set of features
- The latest web technologies providing quick user response and high performance
- This infrastructure allows for highly reduced IT and maintenance saving your airline time and money.

Additional features and functions

- Increase revenue with codeshare flights; automate and manage these using SchedulePlanner
- View your network and connections quickly and easily
- Utilise APM's wide range of reporting or synchronised database for post flight analysis and future planning
- Improve communications and streamline internal processes with APM's integrated database, providing full visibility across departments.

Reach new heights
with future-focused
aviation technology

Providing support for the entire planning and operations process

At APM we believe that technology should help make things easier. We aim to provide airlines with solutions to make the complex simple and reduce time spent on tackling problems.

Our fully integrated solutions are designed to improve efficiency and optimise workflows whilst maintaining compliance and safe flying.

APM products

- **SchedulePlanner**

Aircraft scheduling and slots
